WDGY'S STAFF AND FACILITIES ARE

The aim of the WDGY newsroom is to broadcast the news as rapidly and as accurately as possible. To this end the newsroom is equipped with national wire services, tape recorders, telephone "beep" service, and has access to a new mobile unit. Above from left to right are newscasters Vince Lonergan, Jim McGovern, Norm Syse, and local commentator John G Simmons.

DEDICATED TO THE PUBLIC DEFENSE

WDGY's new mobile unit is fully-equipped for short-wave broadcast and is used to tie-in commercial sponsor with on-the-spot news. Some 500 Diamond D-X dealers through-out Minnesota, Wisconsin, and lowa are special news correspondents for the radio station.

Whenever there's news in the making, WDGY's news director and the mobile unit are on hand to broadcast the event. Here we see Jim McGovern ''covering'' the opening of one beach in the City of Lakes.

WDGY's ultra-modern transmitter building just outside of town is where the station's 50-thousand-watts of power are generated through its 9 towers. In case of an emergency the station can broadcast from the transmitter building.

(Left) Right in the middle of everything is Jim McGovern, here seen taking notes for a first-hand story of a recent loop building explosion. Minutes later McGovern reported the story to the radio audience from a nearby telephone booth via the "beep" system.

(Right) The WDGY microphone carried the news of former Minnesota Governor Luther Youngdahl's recent visit with Mrs. Dorothy Lewis, United Nations representative in charge of radio station relations. This exclusive interview took place in the Governor's office in St. Paul a few days before he was named a federal judge.

The huge station call letters are dwarfed by the 44 acres of land used to support the vast 9-tower-array needed to boom out 50-thousandwatts of power.

Studio supervisor, Kenneth Olson, (standing) and transmitter supervisor, Charles Dinkel, consult each other regarding a maintenance problem arising from the great mass of tubes, dials, and electrical equipment which comprise the radio station. Here, in the transmitter, the programs originating in the studio are carried through to the towers and beamed to the thousands of radios tuned to the 1130 spot on the dial.

(Below) William L Shirer, noted news commentator, covers the national news picture for WDGY through the facilities of the Liberty Broadcasting System.
